

Make a donation to BackCare and receive a bone scan (worth £99) at The Back Pain Show 24-25 February 2012

If you're worried that you might be at risk of osteoporosis, then come along to BackCare's stand at The Back Pain Show where the charity will be showcasing a G4 Dexacare Osteomoter.

Unlike scanners used in hospitals which scan the hip and spine, these portable devices scan your forearm and your heel. The test reveals the likelihood of a fracture, as well as assessing the rate of bone loss. For osteoporosis sufferers it's also a vital way to monitor treatment. The scan takes about 2 minutes - a simple and painless procedure that uses a very low dose of radiation.

A bone density test will give you an accurate picture of the health and strength of your bones. Leading charity BackCare is thrilled to see the arrival of the new G4 Dexacare Osteomoter in clinics up and down the country: the latest technological advance in bone density scanning.

Come along for a scan (usually £99) to see just how easy it is to give your bones a thorough health check at The Back Pain Show, 24-25 February, Olympia, London. BackCare is asking for a charitable donation in exchange for the scan.
